The following logic diagram / flow chart is a visual representation of a program that would be used to determine whether a number input (called "A") is greater than 100

The program starts

The program prompts the user to enter a number which will be referred to as variable "A"

The program will then compare "A" to the number 100, through the inequality ("A" > 100)

If the statement (Is "A" > 100) is true then the program will display (Greater than 100), then proceeds to the end of the program

If the statement (Is "A" > 100) is false then the program will display (Less than 100), then proceeds to the end of the program

The program ends
